# WHAT IS A DECENTRALIZED TRADING SYSTEM ?

A decentralized trading system is built using blockchain technology, where:

1. Game assets (like characters, items, or currency) are owned by the players.
2. These assets are often NFTs (Non-Fungible Tokens).
3. In-game currency may be cryptocurrency or tokens that can be traded.
4. The game logic may run on smart contracts, making it transparent and tamper-proof.
